Joining Vectors

Anita Dhillon

2023-03-16

What are vectors?

- They are undimensional matrices
- they can only hold one type of data, either numeric (integer or double), character, or logical (complex numbers)
- it can hold any type of data
- it can only hold different types of data in a certain way:
 - only columns can have different data types
 - within a coulmn, all rows must have the same data type
 - A data frame can also be identified as a collection of vectors (they can be different or the same type)

```
surveys <- read.csv(file = "./data-raw/surveys.csv")
str(surveys)</pre>
```

```
## 'data.frame':
               35549 obs. of 9 variables:
   $ record_id
               : int 1 2 3 4 5 6 7 8 9 10 ...
##
  $ month
                : int 777777777...
##
  $ day
                : int 16 16 16 16 16 16 16 16 16 16 ...
                ##
   $ year
## $ plot_id : int 2 3 2 7 3 1 2 1 1 6 ...
## $ species_id
               : chr "NL" "NL" "DM" "DM" ...
                : chr "M" "M" "F" "M" ...
## $ hindfoot_length: int 32 33 37 36 35 14 NA 37 34 20 ...
  $ weight
                : int NA NA NA NA NA NA NA NA NA ...
```

Creating vectors -review

A character bector with the function 'c'()

```
c("luna", "Avi", "Anita" , "James", "Charles", "Damian", "Davinder") -> our_names
str(our_names)

## chr [1:7] "luna" "Avi" "Anita" "James" "Charles" "Damian" "Davinder"

1:7 # the colon operator creates a vector of numbers
```

```
## [1] 1 2 3 4 5 6 7
```

```
1:7 -> my_numbers
-100:200
      [1] -100
                 -99
                       -98
                             -97
                                   -96
                                         -95
                                               -94
                                                     -93
                                                           -92
                                                                 -91
                                                                      -90
                                                                             -89
                                                                                   -88
                                                                                        -87
                                                                                              -86

                                                                 194
                                                                       195
                                                                             196
                                                                                   197
                                                                                        198
                                                                                              199
## [301]
           200
```

In how many steps or units does the colon operator increase? In increases in a step of 1

What do we do if I want to create a nummeric sequence that increases in steps different than 1? ?seq

```
seq(-100,200, by =0.1) ->my_numbers
str(my_numbers)

## num [1:3001] -100 -99.9 -99.8 -99.7 -99.6 -99.5 -99.4 -99.3 -99.2 -99.1 ...

letters

## [1] "a" "b" "c" "d" "e" "f" "g" "h" "i" "j" "k" "l" "m" "n" "o" "p" "q" "r" "s"

## [20] "t" "u" "v" "w" "x" "y" "z"

LETTERS

## [1] "A" "B" "C" "D" "E" "F" "G" "H" "I" "J" "K" "L" "M" "N" "O" "P" "Q" "R" "S"

## [20] "T" "U" "V" "W" "X" "Y" "Z"
```

Creating data frames with vectors

The most general way to do this is with the function 'data.frame()':

```
data.frame(names = our_names, numbers = my_numbers)
```

Error in data.frame(names = our_names, numbers = my_numbers): arguments imply differing number of ro

Remeber yectors must have the same length to be part of a data frame:

```
data.frame(names=our_names, numbers = 1:7)
```

```
##
        names numbers
## 1
         luna
                     1
## 2
                     2
          Avi
                     3
## 3
        Anita
## 4
        James
                     4
## 5
                     5
      Charles
## 6
       Damian
                     6
## 7 Davinder
                     7
```

Even though we cant use vectors that are larger to create a data frame, we can use vector that are shorter, and R will recycle the values:

```
data.frame(names = our_names, numbers =1)
```

```
##
        names numbers
## 1
         luna
## 2
          Avi
                     1
## 3
        Anita
                     1
## 4
        James
                     1
## 5
      Charles
## 6
       Damian
                     1
## 7 Davinder
```

To recycle the values of a numeric vector length 2, we have to repeat the vector of names two times so it is a multiple of 2:

```
data.frame(names = rep(our_names, 2), numbers = c(2, 5.5))
```

```
##
         names numbers
## 1
          luna
                    2.0
## 2
           Avi
                    5.5
## 3
         Anita
                    2.0
## 4
         James
                    5.5
## 5
       Charles
                    2.0
## 6
        Damian
                    5.5
## 7
      Davinder
                    2.0
## 8
          luna
                    5.5
## 9
           Avi
                    2.0
## 10
         Anita
                    5.5
## 11
         James
                    2.0
## 12
       Charles
                    5.5
## 13
        Damian
                    2.0
## 14 Davinder
                    5.5
```

Exercise 6

```
length \leftarrow c(2.2, 2.1, 2.7, 3.0, 3.1, 2.5, 1.9, 1.1, 3.5, 2.9)
width \leftarrow c(1.3, 2.2, 1.5, 4.5, 3.1, NA, 1.8, 0.5, 2.0, 2.7)
height \leftarrow c(9.6, 7.6, 2.2, 1.5, 4.0, 3.0, 4.5, 2.3, 7.5, 3.2)
data.frame(length, width, height) -> table
table$genus <- "Taxus"
table$species <- "baccata"
str(table)

        3.5
              2.0
                     7.5 Taxus baccata
## 10
        2.9
              2.7
                     3.2 Taxus baccata
###Extracting/accessing values from vectors and data frames
surveys <- read.csv(file = "./data-raw/surveys.csv")</pre>
str(surveys)
## 'data.frame':
                   35549 obs. of 9 variables:
## $ record_id
                   : int 1 2 3 4 5 6 7 8 9 10 ...
## $ month
                   : int 777777777...
## $ day
                    : int 16 16 16 16 16 16 16 16 16 16 ...
## $ year
                   ## $ plot_id
                   : int 2 3 2 7 3 1 2 1 1 6 ...
## $ species_id
                    : chr "NL" "NL" "DM" "DM" ...
                          "M" "M" "F" "M" ...
## $ sex
                    : chr
## $ hindfoot_length: int 32 33 37 36 35 14 NA 37 34 20 ...
## $ weight
                    : int NA NA NA NA NA NA NA NA NA ...
surveys$record_id -> record_id
```

Another way is with the square brackets '[]'

```
surveys[1:10,"hindfoot_length"]
   [1] 32 33 37 36 35 14 NA 37 34 20
If i want all the values from the rows of column hindfoot length
surveys[ , "hindfoot_length" ] -> hindfoot_length
head(hindfoot_length)
## [1] 32 33 37 36 35 14
Another way is using double square brackets
surveys[["record_id"]] %>%
 head()
## [1] 1 2 3 4 5 6
Exercise 7
surveys$weight -> surveys_weight
surveys["month"] -> surveys_month
head(surveys_weight)
## [1] NA NA NA NA NA
surveys[,"hindfoot_length"] %>%
head()
## [1] 32 33 37 36 35 14
```

[1] 29.28793

head()

mean(surveys\$hindfoot_length,na.rm = TRUE) %>%
